

Ishaan Taneja

CompTIA Security+ Certified | SOC Analyst L1

+919461259259 | tanejaishaan3@gmail.com | linkedin.com/in/ishaantaneja | tryhackme.com/p/ishaan.taneja

PROFESSIONAL SUMMARY

CompTIA Security+ certified cybersecurity analyst targeting a SOC Analyst L1 / Tier 1 role. Hands-on practice in security event monitoring, alert triage, log analysis, and incident documentation via a hybrid SOC home lab (Wazuh SIEM, Sysmon) and TryHackMe SOC simulations (Ranked Top 7%). Skilled in MITRE ATT&CK mapping, IOC hunting, phishing analysis, and network traffic investigation (Wireshark). B.Tech Computer Science background with prior software engineering experience; seeking to monitor real-time security events, investigate and escalate incidents, and follow SOPs/playbooks on a SOC team.

Portfolio -> https://ishaantaneja.github.io/cybersec_portfolio/

CERTIFICATIONS AND DIFFERENTIATORS

- CompTIA Security+ — Verification code: 5f0359e88964428cab9d5d0fc7e8e3fc
- Programming with DSA — IBM
- Linux Unhatched — Cisco — Linux fundamentals and command-line operations (ID: d8e9da29)
- Global Recognition | Innovation Category — Bank of America — Recognized for engineering a secure virtual banking prototype utilizing Unreal Engine

SKILLS

- SIEM & Monitoring: Splunk, Wazuh, security event monitoring, alert triage, log analysis
- EDR / Endpoint: CrowdStrike, Sysmon telemetry, Windows/Linux fundamentals
- Network & Traffic Analysis: TCP/IP, DNS, HTTP/S, OSI, DHCP, SSH, AD, LDAP, Routing, NAT, Firewalls, ACLs, VPNs, Wireshark
- Threat Intel & Investigation: VirusTotal, AbuseIPDB, Any.Run, Hybrid-Analysis, IOC hunting, MITRE ATT&CK, Cyber Kill Chain
- Incident Response: Triageing, investigation, alerting, reporting, escalation, root cause analysis, documentation
- Frameworks & Standards: NIST, ISO 27001, MITRE ATT&CK, OWASP Top 10
- Ticketing & Ops: Jira, case reports, SOP/playbook-oriented documentation
- Languages: Python, SQL, Bash, PowerShell, HTML
- OS & Cloud: Windows, Linux, GCP (Compute Engine, Pub/Sub, Cloud Run, Cloud SQL), VirtualBox, WSL2, Docker

PROJECTS

SOC Home Lab — Threat Detection & Adversary Emulation | April 2026

- Designed a hybrid SOC environment using Wazuh SIEM deployed via Docker on WSL2 to monitor remote Windows 11 bare-metal endpoints (lab).
- Engineered telemetry pipelines by integrating Sysmon to capture granular process creation and network connection data for security event monitoring.
- Orchestrated end-to-end attack simulations, including SYN Floods via Metasploit and user enumeration, to validate SIEM alerting logic and practice initial triage.

Mastercard Cybersecurity Analyst Job Simulation — Social Engineering | March 2026

- Designed phishing simulations using contextual masking and targeted social engineering tactics to test organizational resilience (simulation).
- Analyzed simulation telemetry to identify human-element vulnerabilities, pinpointing a 75% risk factor in HR and 38% in Marketing.
- Developed action-oriented technical training decks to harden high-risk departments against advanced scam detection and credential harvesting.

TryHackMe Path — Guided Learning & SOC Analyst L1 Simulations | January 2026

tryhackme.com/p/ishaan.taneja

- Ranked Top 7% on TryHackMe; completed 50+ hours of labs covering Wireshark network traffic analysis, real-time alert monitoring simulations, case reports, phishing analysis, cyber defence frameworks, and networking fundamentals.
- Honed skills in log analysis, traffic monitoring, identifying IOCs, and documenting investigation findings.

EXPERIENCE

Freelancer (SME) — Codingal | January 2025 – Present | Remote

- Taught over 100 students globally, maintaining a 4.8/5 average instructor rating through engaging, interactive instruction.

Full-stack Developer — Intern — EazyByts | September 2025 – October 2025 | Remote

- Engineered a MERN-stack fintech simulator with Socket.io for real-time market data ingestion.
- Built a high-concurrency event platform using Redux Toolkit and MongoDB, supporting 5k concurrent users.
- Developed a full-stack portfolio with an integrated JWT-secured CMS for seamless CRUD operations.

Sr. Tech. Associate — Backend Developer — Bank of America | June 2022 – April 2023 | Hyderabad, India

- Developed FastAPI RESTful APIs and built a virtual banking prototype in Unreal Engine.
- Authored technical documentation ensuring adherence to OWASP standards.

Teacher Assistant — Coding Ninjas | September 2021 – January 2022 | Remote

- Assisted 200+ learners in mastering DSA with Python and SQL (avg rating 4.7/5).
- Conducted doubt resolution sessions and debugged student code for algorithmic problems.

EDUCATION

Bachelor of Technology in Computer Science and Engineering | August 2018 – May 2022 | Karnataka, India
Manipal Institute of Technology

VOLUNTEERING

Head of Public Relations — Manipal Information Security Team

- Responsible for enhancing the club's brand reputation and cultivating strategic inter-club partnerships.

Cloud Engineering — Google Cloud Skills Boost

- Completed GCP labs covering Compute, Networking, IAM, and Docker; earned badges for cloud-native development.
- Deployed serverless web apps using Cloud Run and Compute Engine, integrating Pub/Sub and Cloud Storage.
